

E-motion - Elbow brace

ART.NO 20206

E-motion is used in post-operative or post-traumatic stabilization of the arm and elbow to provide controlled range of motion or immobilisation. Telescopic mechanism for easy adjustment of the length. The aluminum cuffs around the upper and lower arm can be shaped individually so the risk of slipping is reduced. The orthotics can easily be placed with one hand using snap lockers.

Extension can be adjusted and fixed from 0°- 90° and flexion from 0° - 120°. The setting takes place in intervals of 10°. The setting is secured with cable ties.

Indications: • Post-surgery

- Flexion-extension range control
- Control of pronation/ supination
- Conservative treatments
- Post-plaster casting.

Contraindications: Avoid placing cuff directly on injured or swollen part.

Material: Stays: 40% Aluminum, 35% Polyamide, 15% Steel, 10% Polyester.

Padding: 50% Polyurethane, 38% Nylon, 10% Elastane, 2% Synthetic Carbon fiber. Latex free.

Washing instructions: Textile padding - wash 30°C, for best durability hand wash is recommended, dry flat.

Stays - Wash with a cloth and warm water/mild disinfectant.

Accessories: Adjustable and removable hand support for pronation-supination included.
